### DETAILED ACTION

The following is a first action on the merits of application serial no. 10/627,455 filed July 25, 2003.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Ficht et al. (4,782,801-). Ficht et al. discloses a spherical rotary engine valve assembly for a combustion cylinder in an internal combustion engine, comprising: a valve mounted for rotation and having a spherical shape with an opening formed within an outer surface of the valve, the opening having a shaped surface including a convex portion and a concave portion; a seal having a first and second rings for sealing an interface between said valve and the combustion chamber, a force exerted on a portion of said first ring causing a force between said second ring and said valve outer surface; and a contoured piston head formed on a piston operating within the combustion chamber, said contoured piston head having a first concave section generally conforming to a shape of said valve, and a second concave section having a deeper recess than said first concave section.

Regarding claim 2, housing including a trench for preventing a flow of gas in a direction within said gap.

### **Conclusion**

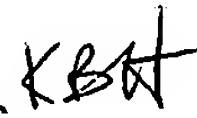

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 5,908,016 issued to Northam et al. is a similar system. U.S. Patent No. 5,074,265 issued to Ristin et al. is a similar system.
